IMPROVED Accept TMX import with some deviation from standard

When a TMX is imported, the i attribute is used to pair the <bpt> elements with <ept> elements. But in standard this attribute must be a number. This is not the case in some TMX imported by client. So we improve this feature in order to accept those deviation from standard

Administration, Project Managers, Administrators - WM-814

FIX When creating a picklist custom field and immediately click "add missing value", the system return an error

When creating a picklist custom field and immediately click "add missing value" before saving, then the system return an error.

Administration, Administrators - WM-801
