

Wordbee Translator

Beebox can connect to any TMS using XLIFF to exchange translation jobs. Beebox can further directly connect to Wordbee Translator, which is Wordbee's web based TMS offering.

This chapter is for Wordbee Translator managers who want to receive translation work from a Beebox.

Topics:

- [Link to a Beebox project](#)
- [Enabling preliminary translations](#)

Once these two requisites are met, you will be able to send Beebox jobs into specific Wordbee Translator projects to follow a specific workflow. Once workflows are completed, the final files will be delivered back to the Beebox project for further processing (validation) or to be retrieved in the dedicated target folder.
